

“Guvnor” – A BRMS for Drools and Managing Other Asset Types

Kris Verlaenen

Core Drools Developer

Toni Rikkola

Core Drools Developer

The Problem(s)

How store rules

How to govern rules

There are more artifacts than just rules

A Solution

Content repositories are well known
(and sometimes loved)

Requires a mind shift: Rules are data, not
code (well not always)

Database vs. Content Repository

Databases are great for “strongly defined”
relational data.

The problem is if you are managing rules + more, its
likely to be heterogeneous data
(spreadsheets, text files, binary files...)

Normal RDBMS doesn't do a lot for this
(but its reliable)

Its also going to be hierarchical for the most part...

Content repos.

Inherently hierarchical

Java standard: JSR-170, JCR

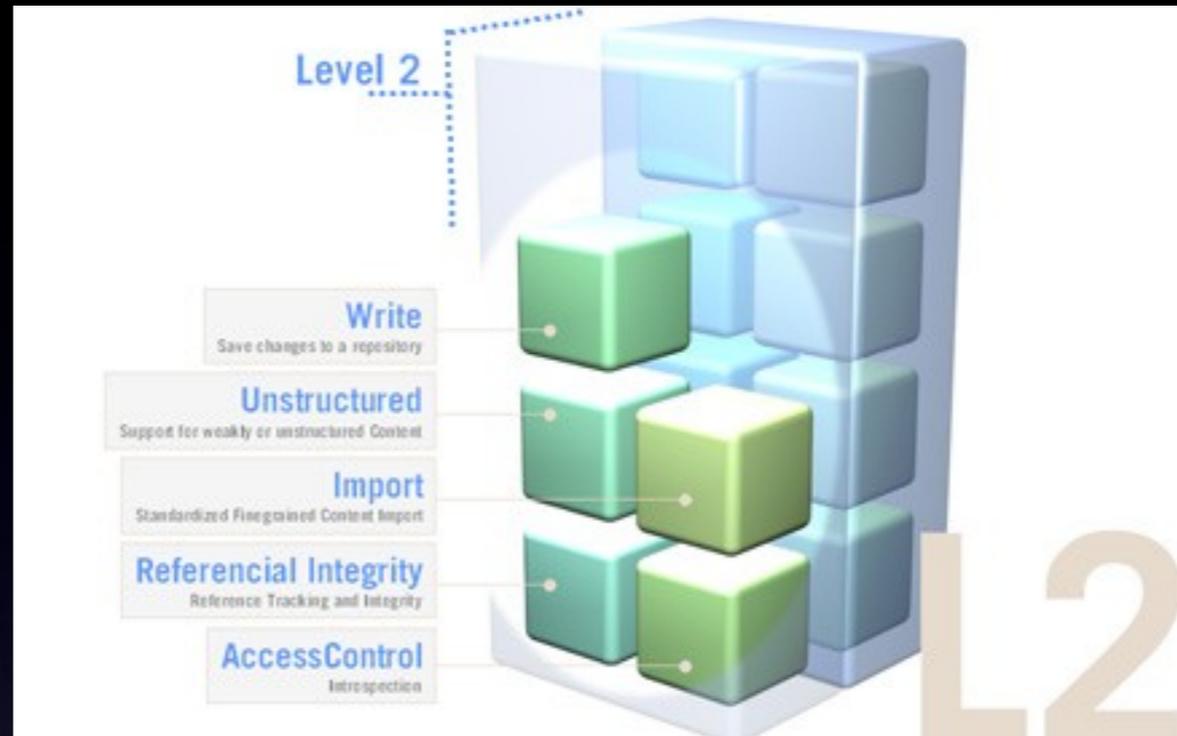

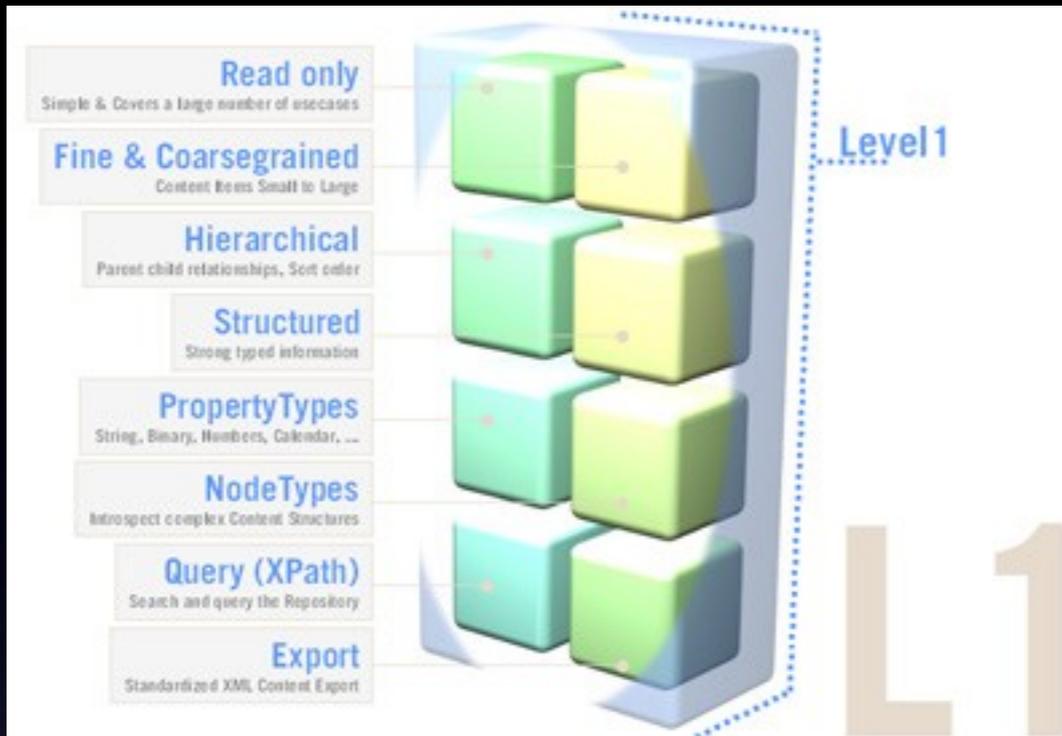

JCR

Java Content Repository
JSR 170

<http://www.jcp.org/en/jsr/detail?id=170>

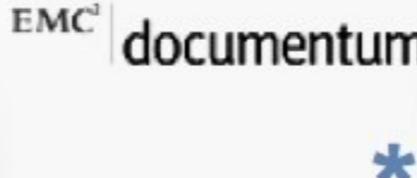

Standard interface for content repositories

Allows portability
Less wheel reinventing

Known Compliant Repositories

(* using 3rd party connectors)

 Apache Jackrabbit	 Oracle XML DB	 Exo ECMS Platform	 Microsoft Sharepoint	 OpenText Livelink
 Day CRX	 IBM FileNet P8	 Xythos Repository	 Alfresco ECM	 Vignette V7
 Interwoven Repository	 IBM CM	 EMC Documentum		

How we use it

Ideal for all artifact types
Excel spreadsheet
DRL
XML
jar files...

User can provide any content, any format, no
database changes required

Back end database support

(Currently using jackrabbit)

Connectors for all major databases

But filesystem based one (which actually uses derby) works just fine – out of the box, zero configuration.

Searching and indexing

Lucene (index is separate to main database)

Versioning

JCR provides versioning “for free”

Very simple to use, each artifact has its own
version history

Trivially easy to “snapshot” things at versions
in time
(so can have versions of collections of
artifacts)

What's it like to code JCR?

```
node.setProperty( "property-name", comment );
node.checkin(); //creates new version

//its a bit like a file system, a bit like a DOM
//but with versioning

//copying a tree of content is trivial:
workspace.copy( source, newName );

//as its all hierarchical, easy !

//SQL like query language, very easy

//versions:
node.getVersionHistory();
```

Plenty of open source options

Alfresco

Apache Jackrabbit (RI)

eXo

...

More problems...

How to expose to users.

Different users:

Systems

Rule people/analysts

Developers

Architects

How we solved

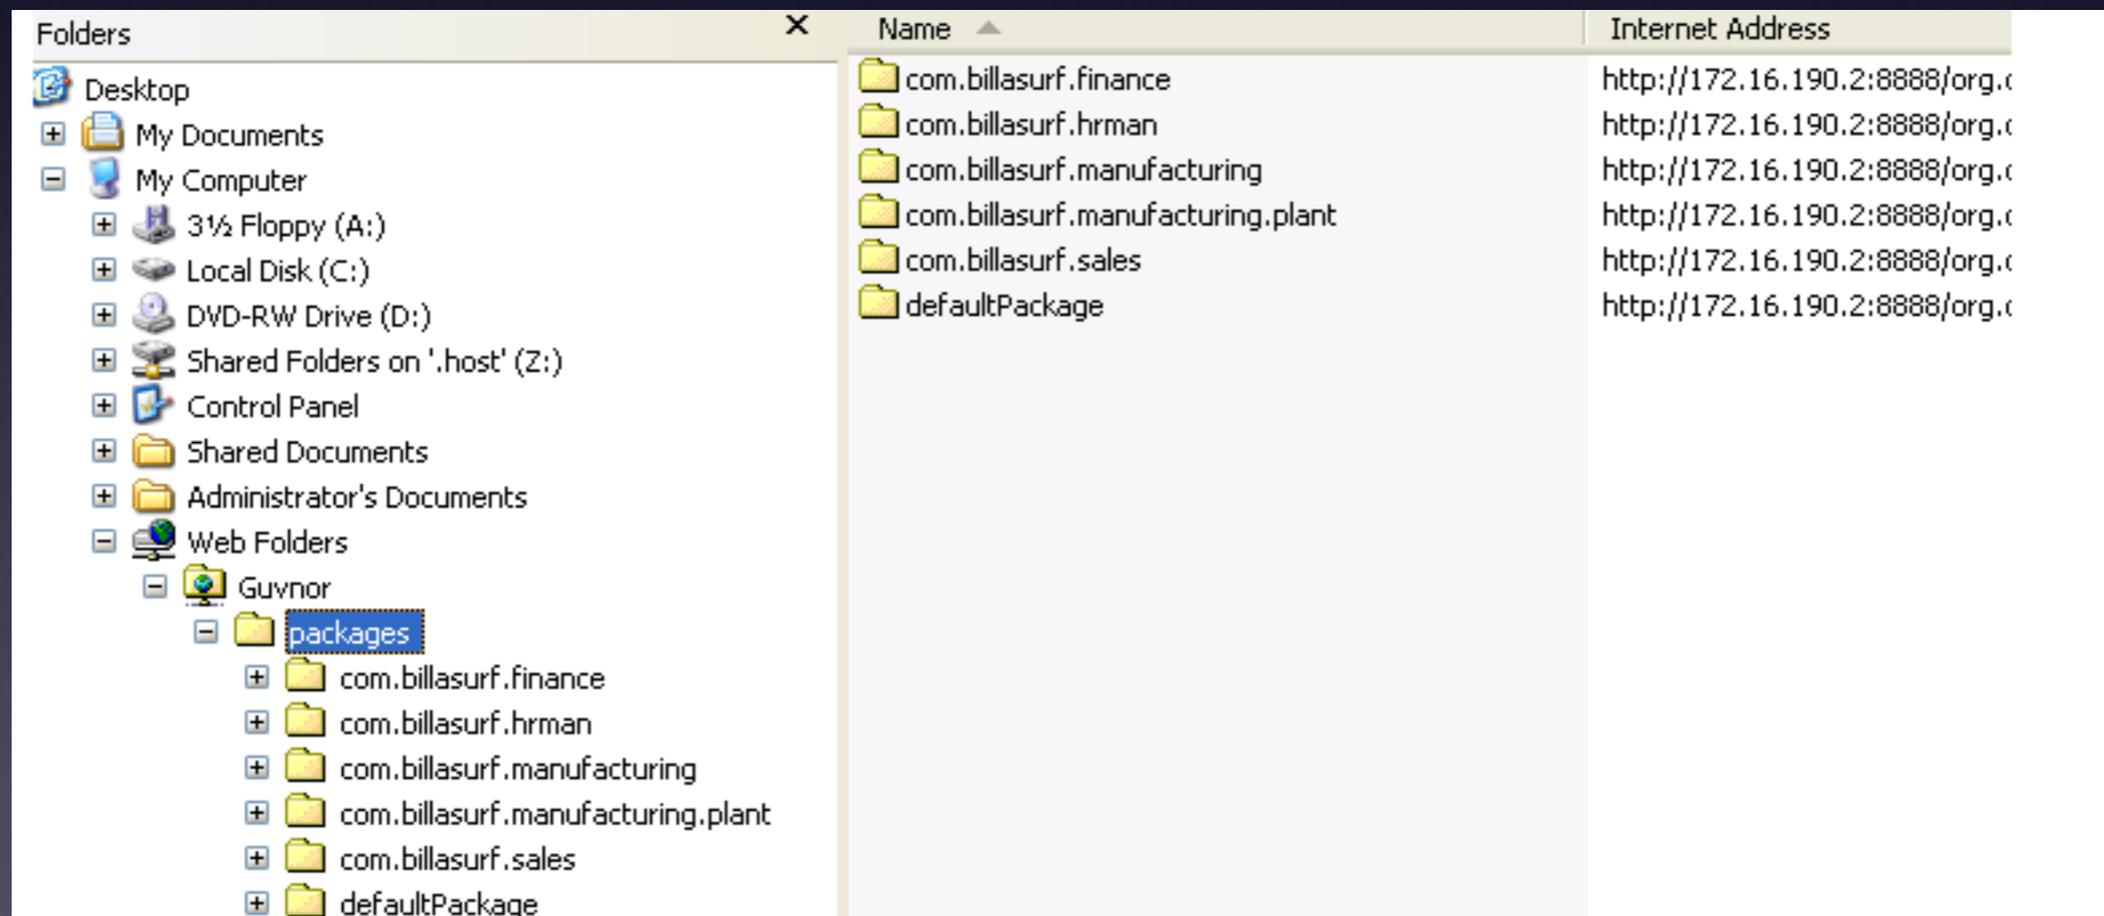

Systems:

Use the web: HTTP/REST
WebDAV (for use as a filesystem !)

(JCR has remoting API for more advanced use cases if needed)

WebDAV

Access repository as file system
Store any/all business rule assets
(even non executable stuff)

The Future: AtomPub

(watch this space !)

How we solved...

Developers:

We have an IDE
Hook up to repository: WebDAV for general
purpose (as a filesystem)

Or, a new eclipse plug in (which uses HTTP apis)

IDEs are best for dev-ish things. Can keep
artifacts in SCM + Guvnor if needed.

Guvnor Repositories

How we solved...

Rule authors/analysts...

The Web !

Web != web pages.

Rich Web Applications
(which need modern toolkits, not legacy)

One repo, many interfaces

WebDAV/HTTP (future AtomPub)
Eclipse IDE
Web

“Different horses for different courses”

The Browser...

Is now a very powerful application platform in its own right.

Netscape's vision was correct. Just took a while.

Now look at the competition:
Chrome, Safari (SquirrelFish), Firefox. IE8.

IE6 must die. If you use IE6, you shouldn't be here. And if your company requires it, find a new job. NOW.

Web Toolkits

GWT was chosen. Code for a GUI turns out to be a timesaver (code fast, refactor later).

Compile down to tight JS code for multiple rendering engines.

No compatibility hassles (well less).

CSS for styling still.

If its from google, its always good (Michael is a fanboi)

Web tools:

The screenshot displays a web-based interface for a Business Rule Management System (BRMS). On the left, a navigation pane titled "Navigate BRMS" contains a tree view under "Rules". The tree includes "Find", "States", "Categories", and several sub-categories: "HR", "Leave", "Training", "Sales", "Manufacturing", and "Finance". Below the tree are buttons for "Packages", "Deployment", "Administration", and "QA".

The main area on the right shows search results for "State: Draft". It includes a search bar with "Find" and "State: Draft" tabs, and a status bar indicating "Showing item #1 to 3 of 3 items. Refresh". Below this is a table with three columns: "Name", "Last modified", and "Status".

Name	Last modified	Status
DomainModel This is the business object model	Feb 21, 2008	Draft
Fibreglass supplier selection This defines XXX.	Feb 21, 2008	Draft
Recommended wax This defines XXX.	Feb 21, 2008	Draft

Run scenario

Results: 

 [p] field [age] was [42].

Summary:  [p] field [name] was [bob].

 [b] field [name] was [boogie] expected [booger].

+ GIVEN

insert [Board] 

[b]

name:

insert [Person] 

[p]

name:

age:

+ EXPECT

 Use real date and time

1 rules fired in 0ms.

Board [b] has values: 

Person [p] has values: 

 age:

 name:

+ GIVEN

insert [Board] 

[b2]

cost:

+ EXPECT

 Use real date and time

0 rules fired in 0ms.

Board [b] has values: 

 name: (Actual: boogie)

More...

(configuration)

+ (globals)

All rules may fire

GWT allows widget composition, reuse

Decision table							
Modify... ▾							
	Description	Advertiser type	age is at least	Postcode gre...	Postcode les...	Set the value...	Set the rea...
Advertiser type: Agency (3 Items)							
1	Good suburbs	Agency	10	4000	4100	→ 42	Loyal
2	Good suburbs	Agency		2000	2100	→ 43	Good region
4	Good suburbs	Agency		2200	2300	→ 43	Good region
Advertiser type: Partner (1 Item)							
3	Partners	Partner	1			→ 49	Other

GWT make web frameworks uninteresting

Server is really just a collection of services, almost no state needed.

Back to the future: Requires thinking a little client server.

Other options: Dojo, YUI, SproutCore, Cappuccino (a new favourite of Michael's)

BORING STUFF: Fine grained security

Role based, work with LDAP/AD.

Less wheel reinvention.

Data driven: package or category based

Guvnor Demo
